

REGULATORY MATRIX

SAFE SUSTAINABLE SOLUTIONS

Food Contact Services promotes an innovative website accessible by subscription to all manufacturers, sellers, importers/exporters of food contact materials: the Regulations Matrix.

User name and password to access the service are the subscriber's own, non-transferable to third parties and communicated by the Writing Company after annual/semi-annual subscription.

The matrix of regulations, once subscribed and obtained the access credentials, is always accessible.

The service allows to illustrate the regulatory environment related to specific laws and regulations pertaining to food contact materials.

The regulatory matrix is an important tool for planning tests necessities to meet the safety requirements of the country of production or marketing of the finished product.

The service is provided on the basis of a solid foundation that includes more than 15 years of experience in the field of consumer goods safety management and verification, particularly materials intended for food contact, gained initially in the food company sector and later on companies operating both domestically and internationally.

REGULATORY MATRIX

Currently, the regulatory matrix allows regulatory searches for 13 different materials in more than 60 countries worldwide.

The primary source of information reported in the regulatory matrix is the Decernis database, to which Food Contact Services subscribes. The platform is comprehensively updated and reviewed every 6 months although monthly there is a process of checking the main websites of the industry's key regulatory bodies.

The synergies developed by managing clients in the global regulatory landscape and operating within multinational corporations have enabled the construction of a network of contacts that is useful for delving into legal developments in different countries. Regular collaboration with the Istituto Italiano Imballaggio and the professional association AIBO Food Contact Expert, through activities and active participation in committees and technical tables, as well as collaboration with Federchimica and control bodies, allows Food Contact Services to have continuous updates on legislative news affecting packaging and items intended for the food contact market.

Finally, the staff working in Food Contact Services regularly attends training courses and conferences, attended by such notable international experts as Keller & Heckman, Smithers Pira, Decernis, 3E, as well as representatives of official international control bodies, this allows for constant updates on new legislative trends and any reference documents being studied or re-evaluated.

It is possible to view and evaluate the regulatory matrix through a DEMO version by accessing the restricted area from www.foodcontactcenter.com, below are the credentials for accessing this version to be entered at the LOGIN stage:

Username: demo
